2.1 Ad Script Prioritization & A/B Test Plan

Script Prioritization Scorecard

Rank	Ad Script Angle	Total Score	Verdict
1	2026-07-15_struggling-with-understanding	37/50	Needs revision
2	2026-07-15_struggling-with-understanding	35/50	Needs revision
3	2026-07-15_struggling-with-understanding	16/50	Needs revision

A/B Test Plan for Ad Script Variants

To identify the most effective angle before scaling our ad spend, we will execute a 14-day A/B test on Meta Ads Manager using the three generated script variants (Fear/Loss Aversion, Aspiration/Gain, and Social Proof).

Testing Parameters

- **Budget Split:** Equal 33.3% split of the daily budget across three separate ad sets (\$50/day per variant, \$150/day total).
- **Target Audience:** Lookalike audience (1-2%) based on existing customer list, combined with interest targeting for Day Trading, Forex, and Technical Analysis.
- **Duration:** 14 days to ensure sufficient data gathering across weekdays and weekends.
- **Estimated Sample Size:** Target ~10,000 impressions per variant to achieve statistical significance.

Success Metrics

1. **Primary Metric (Cost per Lead / CPL):** The cost to acquire a free trial or newsletter sign-up.
2. **Secondary Metric (Click-Through Rate / CTR):** Outbound CTR on the call-to-action button (Target > 1.5%).
3. **Tertiary Metric (Hook Rate):** 3-second video view rate (3-sec views / Impressions) to measure hook strength.

Decision Rule

- The variant with the lowest CPL at a 90%+ confidence level will be selected as the winner and scaled. If CPL is tied, the variant with the highest CTR will be selected.
